SUMMARY 3D computer vision researcher and engineer working at the intersection of neural rendering (NeRF / 3D Gaussian Splatting) and production systems. Author of 15+ papers (CVPR, ICCV, ECCV, TPAMI), and builder of real-time 3DGS systems spanning on-device (mobile, C++/OpenCL) and desktop (C++/LibTorch/CUDA) – turning research into deployed pipelines for 3D reconstruction, on-device 3D scene understanding (egocentric VLM / 3D-QA), and simulation.

CURRENT POSITION **Samsung Research**, Seoul, Republic of Korea
Staff Research Engineer

Sep 2024 - Present

EDUCATION **Yonsei University**, Seoul, Republic of Korea
College of Engineering

Mar. 2019 - Aug. 2024

M.S. /Ph.D. Student in Electrical and Electronic Engineering

Advisor: Professor Sang Y. Lee

Research Area: 3D Computer Vision (Neural Rendering and Its Applications)

Yonsei University, Seoul, Republic of Korea
Department of Electrical and Electronic Engineering

Mar. 2012 - Feb. 2019

Bachelor of Science in Electrical and Electronic Engineering

SELECTED	On-device Egocentric 3D Question Answering and Visualization for AI Glasses
PROJECT	<i>Samsung Research</i>
EXPERIENCE	<i>Staff Research Engineer</i>

May, 2026 - Present

- Built an on-device AI-glass app for 3D question answering (3D-QA) and live 3D visualization from a 1 Hz egocentric stream, porting a VLM-3R-style model on-device with only the LLM stage on a paired PC.
- Engineered a privacy-preserving on-device pipeline that encodes frames (SigLIP, ViT-L) and caches features chunk-wise, enabling text-query chunk retrieval for 3D-QA and reconstruction.
- Designed and deployed on-device a confidence-guided anchor-frame selection that stabilizes CUT3R-family streaming reconstruction under low-overlap 1 Hz capture, improving point-map quality on in-house and EgoLife data.

All-in-One 3D Gaussian Splatting Studio for Scene Object Reconstruction

Jan, 2026 - Apr, 2026

Samsung Research

Staff Research Engineer

- On top of the team’s C++23/LibTorch desktop framework, built an all-in-one 3DGS studio that turns a captured video into a trained 3D scene end-to-end (SfM $\rightarrow$ camera pose $\rightarrow$ 3DGS).
- Added geometry-aware optimization (normal priors, anti-aliasing) and mask-based object filtering, integrating SOTA models (hloc, Depth Anything v3, StableNormal, SAM2, Cutie) as a unified plugin pipeline.
- Reconstructed scenes delivered to the robot-simulation team as backgrounds for robot learning (Physical AI).

On-device Efficient 3D Object/Scene Modeling based on 3D Gaussian Splatting

Jan, 2025 - Dec, 2025

Samsung Research

Staff Research Engineer

- On top of a teammate’s C++/OpenCL prototype, co-developed a real-time 3DGS pipeline running fully on-device on Galaxy; learned CUDA / GPU programming from the ground up to master 3DGS internals.
- Integrated and benchmarked SOTA 3DGS optimizations (e.g., per-Gaussian backprop, tile-based rasterization) to accelerate on-device training to high resolution.
- Designed object-centric modeling: mask-based cropping, sparse-point pre-filtering, and mask-based post-filtering for clean object-only reconstruction.
